# Trade Area Analysis of Retail Sales

## Swift County

The following tables provide information on retail sales by merchandise category. "Potential sales" is a standard to which actual performance is compared. In calculating potential sales, population and income characteristics are taken into account. Potential sales can be used as a guideline or "par value" in analyzing retail strength.

Deviations from these norms can be analyzed to first judge whether they should be considered relevant. If the differences appear to be significant (whether in dollar amounts or relatively with percentages), additional consideration is merited. Categories with undesirable performance may be further examined for potential corrective action. It is also important to determine whether or not the situation is relatively uncontrollable due to external or extenuating circumstances. In cases of favorable differences from expectations, the positive aspects should be identified and built upon.

# Swift County Retail Trade Performance in Percentages

The chart below depicts the percentage amount Swift County's actual sales were above or below potential sales in 2018 by merchandise group. Of the 11 merchandise categories with reported data, sales in 3 of the categories were above what would be expected based on the county's population and income characteristics as well as statewide spending patterns. The strongest merchandise group by this standard is the Gasoline Stations category, which has a 90.9 percent surplus. Overall, Swift County had a retail sales leakage of 41 percent.

It is important to note that variations in a county's relative retail performance may occur for a variety of reasons, some of which are beyond the control of local policy. Proximity to larger population centers and transportation patterns, as well as the individual retailer's management and marketing, can cause the retail sales of a particular county to deviate substantially from potential sales. It is important that decision-makers consider these influences when constructing policies, plans, or projects.

# Swift County Retail Trade Performance in Dollars

The chart below depicts the dollar amount Swift County's actual sales were above or below potential sales in 2018 by merchandise group. Of the 11 merchandise categories with reported data, sales in 3 of the categories were above the calculated potential. The strongest merchandise group by this standard is the Gasoline Stations category, which has a \$1.9 million surplus. Overall, Swift County had a retail sales leakage of \$32.8 million in 2018.

It is important to note that variations in a county's relative retail performance may occur for a variety of reasons, some of which are beyond the control of local policy. Proximity to larger population centers, management, marketing, and transportation patterns are just a few factors that can cause the retail sales of a particular county to deviate substantially from potential sales. It is important that decision-makers consider these influences when constructing policies, plans, or projects.

### 2018 Retail Sales per capita

# State of Minnesota Per Capita Taxable Retail Sales & Threshold Levels for Selected Goods and Services 2018

*Threshold level refers to the number of people per business, which can be used as a general guide for determining the "critical mass" necessary to support a business. These are broad averages for the state as a whole and do not reflect differences in income, tourism, agglomeration, establishment, etc. Further, the business counts are based on the number of sales tax returns filed and are converted to "full-time equivalents." Multiplying people per business by sales per capita yields average sales per firm. In addition to state averages, averages for the non-metropolitan regions were calculated by excluding the seven county Minneapolis-St. Paul metropolitan region.*
